

## **NAIL AFTER CARE INSTRUCTIONS**

Thank you for choosing to use the BIO SCULPTURE GEL nail system, now that your nails look lovely, you need to take care of them.

- After one week you will need to remove the Top Coat with your Bio Sculpture Dual Cleanser or Bio Sculpture Nail Polish Remover. Once this is done, wash your hands, dry thoroughly and replace your Top Coat. This will bring back the shine to your nails and protect your gel.
- Repeat the above after week two and week three.

If your nails have hairline cracks, this will be caused by the Top Coat, so follow instructions above.

### **ADVICE**

- Oil based products and strong detergents can cause gel to lift, so always use gloves when cleaning and gardening.
- If swimming regularly, wash hands after swimming to remove chlorine as this is a very strong chemical that can cause your gel to lift. Replace Top Coat more regularly to protect gel.
- After applying sun tan lotions, wash hands thoroughly or use a wet wipe as this can cause gel to lift and discolour.

It is at your own risk if you use other brands of products with Bio Sculpture Gel, as they may contain ingredients that cause the Gel to lift.

Bio Sculpture offer compatible products for aftercare, that your nail technician will be pleased to advise you about.

**P.S. TREAT YOUR NAILS AS JEWELS.  
DON'T USE THEM AS TOOLS.**
